**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1,3-8, drawn to determine a type of encoder based on a lost-frame rate, classified in class 370, subclass 253.
  - II. Claims 9-14, drawn to determine a type of encoder based on jitter estimation, classified in class 370, subclass 238.
  - III. Claims 16-19, drawn to determine a type of encoder based on a call discriminator and congestion, classified in class 370, subclass 229.
  - IV. Claims 20, and 22, drawn to select a type of encoder based on a background noise condition, classified in class 370, subclass 317.
  - V. Claims 23, and 24, drawn to determine a type on encoder based on the network utilization information, classified in class 370, subclass 235.

Inventions I-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I or II or III or IV or V has separate utility such as determine a type of encoder based on lost-frame, jitter, congestion background noise and utilization. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
